

Always OnGuard™

Total Security Knowledge Management Solution™

...all you need to know about
Airport Security:
OnGuard is installed at the most
secure airports around the world.

Member of the Following Airport Associations:

Lenel® OnGuard®

Access Control Solutions

- ➔ **OnGuard Extended Enterprise™**
Advanced, distributed multi-regional, integrated security management system (U.S. Pat. 6,233,588)
- ➔ **OnGuard Enterprise™**
Advanced, single-region, integrated security management system (U.S. Pat. 6,738,772)
- ➔ **OnGuard Mobile Enterprise™**
Wireless security management system

Identity Management Solutions

- ➔ **OnGuard ID CredentialCenter™**
ID credential, PKI, smart card and biometrics management system

Video Management Solutions

- ➔ **OnGuard VideoManager™**
Seamlessly integrated, IP-based digital video management system
- ➔ **OnGuard GO!™**
Access control, ID management, and digital video recording, integrated on a single unit

Open Architecture Integration Services

- ➔ **OnGuard OpenIT™**
IT integration service
- ➔ **OnGuard DataExchange™**
Advanced data import/export service
- ➔ **OnGuard SNMP™**
Network management integration service
- ➔ **OnGuard OPC™**
Process control & building automation integration service
- ➔ **OnGuard Visitor™**
Visitor management system

LENEL®

Always OnGuard™

Only Lenel offers two comprehensive solutions to provide maximum facility security and continuous passenger tracking and identification!

Third Party Integration

Lenel OnGuard is the most complete security integration package available, offering four major integration utilities: OnGuard OpenIT™, OnGuard DataExchange™, OnGuard OPC and OnGuard SNMP—all providing unparalleled open architecture capabilities. OnGuard can integrate not only with an existing security infrastructure, but goes further to integrate with building and airport automation systems, to produce a security and information powerhouse like none ever seen before. Most importantly, this integration is achieved through software, not hardware, and is written to available IT standards, to maximize reliability and ensure forward migration compatibility for years of investment protection.

Identification

Secure credentials can easily be created, managed and authenticated with OnGuard ID CredentialCenter™. This unique product offers seamless integration of biometrics and smart cards, prevention of tampering and forgery, and management of visitors and contractors. ID CredentialCenter allows users to choose from a virtually unlimited set of options for badge types and image printing. All required personnel data can be easily imported and exchanged with Human Resources databases, Active Directory, even old ID systems. For remote sites, OnGuard MobileBadge™ can save time and money by providing portable badging stations for enrollment of employee or contractor groups, without lost time trying to access a central administration site. In addition, ID CredentialCenter can be used to manage other applications on the smarts cards.

Threat Level-Based Access Privilege

Originally developed for US Navy bases and ships, OnGuard Mobile Enterprise enables different user groups to be assigned different access levels depending on predefined threat levels. When the threat level is raised, less essential personnel can be denied access to sensitive or sterile areas. Mobile Enterprise also puts the entire security platform at the disposal of a sentry on rounds. It also permits mobile sentries to view live camera images from anywhere in the facility.

Surveillance

Lenel OnGuard provides a completely integrated digital video surveillance package, utilizing traditional digital video recorders or newer technology network recorders connected to any required camera technology. The real horsepower behind this functionality is the system's unequalled ability to provide in-depth investigative and monitoring tools. All guard tours can be followed and recorded in an easy to manage fashion. Users under watch or investigation can be traced and recorded. Critical events can be easily and quickly reviewed in an emergency. The system also employs IT standard storage technology to ensure ease of management and low-cost deployment for long term archiving requirements.

Perimeter Protection

Lenel can monitor and manage most forms of perimeter protection, including fencing and proximity sensors. Lenel can then readily integrate those units together with video surveillance, to provide a complete sensing and monitoring blanket around the facility perimeter.

Airside/Landside/Sterile Area Security and Monitoring

Lenel's security management software allows all landside/airside technology to be managed from a single central system, avoiding the confusion and difficulty of monitoring several independent systems. From card readers, to biometric authentication, to camera surveillance, to verification of identity, to monitoring and management of alarms, all tasks can be accomplished with the click of a mouse.

Disaster Recovery

If a system compromise is considered a real threat, planners can take advantage of a large array of backup, standby and redundancy options for each system and subsystem. The system can also be configured to shift over to backup command and control centers. In addition, the system has built-in capabilities to account for users in the event of emergency evacuations.

Destination Assurance

This feature, also known as the "anti-loitering" feature, holds users accountable for reaching their destinations without stopping or remaining in other areas along the way. It is an extremely useful tool in complex facility layouts where, by logistical necessity, contractors or visitors might need to traverse areas they are not otherwise allowed to visit.

Reporting and Investigative Tools

Lenel OnGuard offers the most in-depth reporting capability in the industry. Managers can get complete reports not only on incidents or events, but also on trend analysis, traffic, false alarms and violations by users. OnGuard ships with over 110 standard reports, and offers the ability to create additional customer reports to meet specific reporting requirements.

A Sample of our System Installations

Port Authority of New York & New Jersey

- Newark International Airport
- LaGuardia Airport
- John F. Kennedy International Airport
- United Airlines at JFK
- Korean Airlines at JFK
- British Airways at JFK
- Federal Express at JFK

Minneapolis-St. Paul International Airport

- Mesaba Airlines at MSP

Spokane International Airport

Williams Gateway Airport

Key West International Airport

Calgary International Airport

Ottawa International Airport

Ben Gurion International Airport (Israel)

- Haifa Airport
- Gilat Airport

Scandinavian Airlines at Oslo Airport (Norway)

Wilson, Nairobi International Airport (Kenya)
